(54) MOUNTING MECHANISM FOR PIN MIRROR CUTTER

(57)Abstract:

PURPOSE: To provide a cutter mounting mechanism wherein a pin mirror cutter can be easily mounted/demounted relating to an adapter to enable also total unit rigidity

to improve of the cutter.

CONSTITUTION: Two or more splines 9 are provided in a circumferential direction with an equal space in the peripheral part of a pin mirror cutter 1, and a spline groove 10 of fitting the spline 9 is provided in the internal peripheral part of an adapter 3. These spline 9 and spline groove 10 are formed in a shape having a tapered angle α , to make tapered fitting. By this tapered fitting, mounting/demounting the cutter can be facilitated while obtaining a centering effect, and supporting the cutter can be also performed without thinning thickness of the peripheral part.
